General Comment

I oppose this proposal, which would enshrine organized theft of intellectual property as the basis of national policy. It would also deprive Congress of the power entrusted to it by the framers in Article I, section 8 of the US Constitution to establish copyright protections.

Corporations are supposed to be enterprising, not engines of learned helplessness excused from contributing to the general welfare of the land and people of the United States. Now it appears they can't develop AI without stealing the raw materials - text and content - from the people who created it.

The vast amounts of water needed to generate the energy for an AI project will not be available for any other use, including firefighting, irrigation, and supplying public water systems.

AI has not been shown to be a public good, so this proposal to develop an action plan is premature. Should it ever be established that AI is a public good, the Fifth Amendment to the Constitution prohibits "taking without just compensation" the property, including the intellectual property, of any person, in order to produce a thing alleged to have public value.

This proposal is a broad, reckless license to violate the Constitution on two fronts. It's lawless and should be rejected.
