General Comment

AI is an over-hyped, terrible technology that does nothing more than steal works from artists of all kinds (music, art, film, writing, voice acting and more) to output far worse quality works. Its already been proven to be a disaster for companies like NIVIDIA, and takes far more effort for human artists to clean up the AI's output to make even barely passable than for the artists to make the art themselves at higher quality with real heart and soul. A stick figure has far more artistic merit than AI's garbage output. AI is also a massive energy drain and has been further damaging the environment accelerating the decline of our planet.

There are also MASSIVE Cyber-security problems with allowing AI to be unregulated as time goes on. Chat GPT outputting dangerous misinformation about a variety of topics, especially in regards to medical situations, political information, science, and even just basic things that the AI will just get wrong that could get people hurt or killed. We've also already have seen AI being used to mimic people's voices, which is insanely dangerous beyond voice actors and film actors being screwed over. Someone can far more easily pretend to be you and steal your identity for fraud, and most terrifyingly destroy your life by making it seem like its you doing and/or saying something terrible by mimicking your voice and likeness.

AI has no positive future on any front.
