General Comment

I am writing as a United States citizen, an artist and a concerned individual with a stake in the future of the various creative industries that stand to suffer if companies like OpenAI continue to operate with flagrant disregard for intellectual property rights and basic human creativity. I emphatically oppose the development and implementation of generative AI, particularly in the form in which these companies present it.

By their own admission, the companies behind these technologies require the legalized theft of untold numbers of copyrighted materials in order to continue operating. This is an unacceptable requirement, and acquiescing to their demand to effectively ignore all intellectual property rights, up to and including copyright, in the name of some ill-defined and overpromised future growth would be a heinous overreach and a devastating blow to every working creative in the country. Generative AI is not some magic thinking computer — it's plagiarism with extra steps, and it has no place in any serious discussion about the future of the American economy.

Instead of dealing a horrible blow to every creative industry in the country, consider instead simply choosing NOT to dismantle copyright. AI is not sustainable, and it is not the future.
