As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-1z9e-5whf
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-7898

Comment on FR Doc # 2025-02305

Submitter Information

Name: Eric Guess

[REDACTED]

General Comment

I work in IT. I regularly deal with computer, files, and maintenance on those systems. I've worked with legal firms, realtors, police departments, city governments, printers, fabricators, welders, mechanics, librarians, taxidermists, restaurants, marketers, artists, photographers, writers, and countless other small businesses as well as private citizens.

Not a single one of them has carte blanche rights to access and use anyone else's data without well defined processes.

In my work, I've also seen the damage unregulated and unrestrained Large Language Models and other AI systems have done. My own job is far more difficult with these systems, with no regard for quality, inserting their output in to my research. Instead of finding solutions from other "computer nerds" like myself, I'm wading through pages of AI generated garbage all trained on the same incorrect data.

Not only does the data fed in to it need to be to the same regulatory standards as everyone else - that is, the copyright holder has given explicit permission to allow the use - the complete lack of regulation of the content means the output ranges from useless to dangerous, with the potential for loss of life.

I am an adult, I've been around a bit, I like to think I can tell good information from bad, and I check information from multiple sources.

Most ten year olds don't.

Children will die if this isn't reigned in, if they haven't already.
