General Comment

I firmly believe that Generative image creation ai is an absolutely negative use of technology, and resources. While AI can definitely be used to help people in places like medicine and certain areas of scientific research, it's use in creating image relies on stealing the work of copyrighted and unprotected material, discourages people to make art for themselves, and all around is mostly used to allow people to not have to pay other people for their work in general. Allowing AI to freely access copyrighted and otherwise protected is purely allowing thieves to steal the hard work of others and selling a product that will do little else but destroy our country's artists and art, while lining their own products for doing nothing.
