General Comment

As an ordained clergy person, my livelihood depends on using words to bring comfort, challenge, hope, and understanding to a variety of people from different backgrounds and experiences. The guardrails of copyright law allow these words to be tailored to the community that desires to hear them. Allowing A.I. companies to learn from my words without learning the context those words were spoken in would create an A.I. model that thinks it knows more than it does. Plus it would violate the religious liberties of the congregation that has called me to serve it. A.I. models should have to follow the same copyright law as everyone else. If it doesn't have the intelligence to do that, then it's missing half of what its trying to be.
