

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-21qx-rq8m
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-7959

Comment on FR Doc # 2025-02305

Submitter Information

Name: Devin Lynch

General Comment

AI, from what I've seen and have been told over its massive presence since the arrival of ChatGPT a few years ago, offers little of actual value to the average American. It might seem that AI programs could create conveniences, but when they are incredibly clunky, inaccurate if not outright wrong or misleading, or filled with hallucinations (made-up information by the AI that it passes to readers as if it were real) that it can't detect if they are real or otherwise. If we can't trust the information on the internet as websites and browsers force AI on users, those sites can harm their pursuit for knowledge by AI's failures.

Corporations like OpenAI, Google, Microsoft, Apple, etc. like to present AI as the new timesaver, but they save little effort with such defective programs. These companies force everyone to use them despite their problems. AI also risks stealing jobs and hobbies from Americans as large corporations might use an AI program instead of a human being to write, analyze, or extrapolate information, creative or otherwise. The fact that AI is built on stolen written work, doesn't help. AI's purpose is to steal the chance to give a voice to people creating authentic information and stories.

AI is a solution looking for a problem; as long as those running the businesses behind the most prolific AI can't help but steal millions of assets and dollars from the average American, they should not be allowed to continue to steal. AI simply doesn't belong in America if its only way to thrive is to steal.
