General Comment

As an English teacher, AI is making my job harder every year because students use it to plagiarize on work or believe that frequently incorrect AI summaries on Google are true. It doesn't just fool teenagers but many adults as well. Why are we prioritizing technology that's pushing frequently false information online? We already have too much false information online. This does not fundamentally improve any of our lives.

AI models are also stealing the hard work of writers and artists across all fields and practices. It fundamentally cannot survive without theft, and its outsized energy usage is damaging to the environment. It should have no place in our future as a country.
