General Comment

AI as modern society has comes to understand it needs to be regulated and it certainly shouldn't be allowed to train on copyrighted materials without the knowledge, consent, and licensing of said material. It already has been used to do harm in revenge porn altered images, to auto-deny people seeking to use the health insurance they paid for, and to spread misinformation since the models that are already active can't tell right from wrong.

Creating an environment where the accountability is even less than what already exists won't be good for anyone other than the pockets of its investors and truly harmful to all else.
