## General Comment

I find that this is an exploitation of copyrighted material that will be abused heavily if implemented. To implement this would require a HUGE amount of energy and resources for very little return from stolen sources. Not only that, he would makes us beholden to a few tech companies that would never have the interest of the technology any more efficient than it can ever be.

I also find that generative AI has had more than enough time and data already scraped from sources to show that it is far to unreliable in any instance for any decision and knowledge that requires expertise, experience, and accountability.
