General Comment

I do not, under ANY circumstance, believe AI holds a place in the future of the US as it steals from the livelihood of artists, entertainers and workers not only here in America, but everywhere as a result of it's uprising. It cannot be fully trusted as it profits off of theft, leveraging the idea to replace skilled labor and is fleecing the eyes of the American public at large.

It's a dead end technology at the end of it's "hype cycle", for all intents and purposes. Companies and investors are throwing money at this tool hoping to stumble onto a way to make money have yet to succeed thus far and new models show that building bigger models yields fewer and fewer returns. It's all no more than a 'speculative market' ready to pop. Not to dissimilar to the likes of NFTs and Cryptocurrency; built primarily on false promises to fool the public and creates even bigger legal problems by enabling those who fall for it.

Not to mention huge data security concerns should these tools fall into the wrong company's hands.
