General Comment

There is no place for artificial intelligence in the present, much less the future of the US. You know why? Because the energy it takes to run artificial "intelligence" is resource-heavy to the point of being environmentally destructive.

AI is not "intelligent," it is a plagiarism cesspool of unoriginal thought that offers no improvement to the quality of life of the American public. Why are you planning on feeding limited, valuable resources to something so stupid it cannot differentiate between a page of text vs a page of text in columns? Any literate 8-yr-old can do this, but ai cannot.

Since the existence of child labor laws isn't stopping you from hiring 8-yr-olds, then what is? Is it their undeveloped ability to critically think or plan? Because ai cannot do those things either, but an 8-yr-old is more creative and innovative than those dumb plagiarism machines who, even with thousands of years of human creativity fed into them for the past decade, ****STILL**** can't create original work.
