General Comment

Hey, shh, DON'T.

I'm a public librarian and I've seen the library field get flooded with AI trash over the last couple years. I've never seen AI help any human flourish who wasn't already the rich tech bro behind it.

For one thing, AI-generated e-books are flooding digital collections and making harder for my patrons to find the information they are actually looking for. No one wants the AI generated stuff, it clutters the filter when you are trying to find, say, *The Women* by Kristen Hannah, no the crappy AI-generated summary of the book.

Did you know that AI generators have a high margin of error? And "hallucinate", meaning the output is often things are are wholly untrue. Why do you think this will "promote human flourishing" or "national security"???

TL;DR — AI is trash, don't play with trash.
