General Comment

Artificial Intelligence, primarily LLMs (Large Language Models) or generative AI, devalues art and the works of many forms of artists. It encourages companies to cut corners and unnecessarily axe jobs in artistic fields. Additionally, the size of data centers necessary for running LLMs and generative AI models are enormous and expansive, resulting in massive energy bills that consume vast amounts of energy.

Furthermore, LLMs generally require large quantities of harvested data, typically copyrighted material, in order to generate their results. Many companies and individuals alike did not consent to having their data scraped by companies such as OpenAI, who argue that they should be given free reign to harvest data for free, or else they will not be able to operate. This undermines the purpose of copyrighted material, and is not only hypocritical, but threatens the nature of releasing copyrighted material on the internet.
