General Comment

The hype around Artificial Intelligence is destructive to business from many angles. Ignoring copyright steals money from both people and corporations and does not provide them a benefit. These companies market themselves with rampant speculation and are charging customers for promised products that do not exist. Even with their massive data sets, current models provide accurate responses less than half the time. These technologies need decades of refinement and advances in other areas of computer science and technology (such as memory density, power efficiency) to be feasibly useful. Giving them permission to ignore copyright will not speed things up. They have already BEEN ignoring copyright and they have hit the limit of their usefulness.

It is frankly absurd that one company (for example, Open AI), is allowed to ignore laws in order to make a profit from companies that have followed the law. It could perhaps be forgiven for a solely intellectual endeavor, such as experimentation at an educational institution. It is nonsensical to think one business should be allowed to steal from another, and insulting to think they should be able to then profit from that theft.
