## General Comment

The AI systems made by Big Tech companies like OpenAI (Microsoft) and Google threaten to destroy thousands of American small businesses with their recent demand to create special carve outs in copyright law. The purpose of American copyright law is to protect the incentive to create and innovate. What is the incentive to create when big tech corporations will be able to freely help themselves to the work of others for their own financial gain? If the business model does not work without theft, it is a bad business model. Full stop. Please, do not create new copyright exemptions that allow Big Tech companies to exploit and steal from creators and everyday Americans without permission, compensation, or transparency.

This administration's AI Action Plan should focus not on giving away creator content to Big Tech companies, but rather on ensuring a fair marketplace with competition:

First, the government should ensure that creators and everyday Americans give effective consent, so that we can decide when and where our work is used by AI systems.

Second, the AI Action Plan should encourage a robust licensing marketplace, so that the incentive to create for small businesses is preserved. Our work has immense economic value, so the value generated by that work should accrue to the original creators, not just Big Tech.

Finally, the AI Action Plan should require transparency from Big Tech companies, requiring them to disclose what material is in their training datasets, and label what content is AI generated.

Thank you for your time.
