General Comment

The entire edifice of AI as currently practiced is an end-run around the legitimacy of copyright law for no valid reason. There is no excuse for prioritizing "AI innovation" at the expense of copyright, to pretend otherwise is to privilege large companies' right to push around smaller companies and individuals to gain market share. No valid reason for this has ever been offered because there is none. If AI cannot operate within the bounds of copyright law and fair use it does not deserve to operate, and private sector AI innovation has no right to play by a different set of laws than the rest of us. Any different approach is an unfair handout to large tech businesses at the expense of the rest of us and undermines the intellectual property that has been bought with the sweat of its owners' brows. The predatory rhetoric of AI companies is an embarrassment born of their inability to succeed if they must play by the rules. Despite the hype it remains deeply unclear if AI has the broad future its inventors claim, as every non-narrow usage proffered to date has annoyed consumers to no real benefit, and there is no obvious broad use case for generative technology with no notion of correctness. Do not let AI play by its own rules, the rules we have are perfectly good and the liars pushing AI don't deserve special ones just because their technology isn't good enough to stand on its own feet without cheating.
