As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-27lz-0dmi
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-8075
Comment on FR Doc # 2025-02305

Submitter Information

Name: Scriptor Beaumont
Address:

General Comment

AI implementation has been nothing but an unnecessary time sink. The existence of AI tools in my daily life has not improved anything.

I don't need an AI summary of a Google search query when the first actual result on the page answers my question just fine. These AI summaries are prone to spreading false information as well. Without being able to see the source that these AI summaries pull from, I'm inclined to never trust them.

I don't need ChatGPT to write me a resume when I know how to write one myself. AI writing tools are also prone to plagiarism, and as a person who values academic integrity, I refuse to use them. It sets a bad example for students as well because it disincentivizes creative thought and effort. Why learn how to write if the AI can just write for you?

AI in the arts has been a travesty. Professional artists, many of whom struggle to find jobs, are having their original work stolen and used for AI training without permission. People can then use programs like Stable Diffusion to make rip-offs of those artists' work, passing it off as their own. The resulting art is not only used for plagiarism, but also to create deepfakes and harmful propaganda. This has had a terrible impact on real human lives.

How can Americans be expected to be optimistic about AI when our future looks so bleak due to these issues? If America is to become a world leader in the development of AI, we should be using it to create real, tangible good. Not just convenience. Not just shortcuts. Technology should always be used in service of humankind, and current AI development does not seem to be headed in that direction. I am not convinced that removing roadblocks to further AI development is going to help anyone.
