General Comment

As with all computing technologies, those that are currently deemed 'artificial intelligence' should be subject to regulations that ensure the safety and rights of the American people. We should not allow technology companies to steal our intellectual property, both because it violates our citizens' right to profit from our own work, and because it will lead to an erosion of the intellectual and artistic strengths that have made this country an innovative powerhouse that effectively spreads our cultural values around the world. The current push for generative AI and 'AGI' by large technology companies has been an abject financial failure, and they are hoping to recoup their losses for this mistake by fleecing the American people. I do not support further propping up this losing venture, especially when it comes at such high cost in terms of safety and valuable resources. If this technology is useful, let them prove it in the free market, rather than come begging for special permission to steal from hard working Americans, hoard the country's resources, or flat out grab tax-payer money.
