General Comment

Open AI being exempt from copyright will harm all forms of business and financial progress in the US by stealing intellectual property and products owned by companies and individuals. By the rules of capitalism, if a company cannot be successful on its own merits with its own products in the marketplace, then it should not survive. AI has proven itself to be inefficient, ineffective, costly, and useless in any context. Propping up a failed business is a waste of government time and money, especially when it will only drain other companies resources and undermine the profit of all other industries it steals from.
