General Comment

As a writer whose work is available to read online, I do not consent to it being used to train AI that companies have openly stated they plan to use to directly compete with human writers using the regurgitated recombining of existing works. Those are derivative works by definition. Copyright protects the rights and livelihoods of human creators. Few enough creators get their work noticed and paid for and the last thing we need to do is flood the market with AI slop cobbled together from the hard work of humans who have not been compensated for the use of their material. Either they need to pay licensing fees for every creator whose work they want to use for their training data, or cease and desist.
