As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-294m-yuun
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-8116

Comment on FR Doc # 2025-02305

Submitter Information

Name: Colin Bergen

[REDACTED]

General Comment

I can see the value of AI in fields such as medicine, but it seems to me that this plan calls for the unfettered use of any and all copyrighted works for AI generation. This to me does not seem like a way to improve the lives of Americans, but rather it would be a sanctioned robbery of their hard work. Companies have fought hard to maintain copyright for a reason. One's creative output, their creativity identity, is a precious resource. It sets them apart from the competition. Stealing from them to aid an LLM is to deny them of that identity, as well as their drive to create anything of their own. Those who still have their creative drive and can afford to find work abroad will do so. I thus have to wonder - what will become of the US if all the creativity we have to offer is recycled, regurgitated content from LLMs? How are we to compete with the world if we can no longer add anything new to it?

Allowing AI and AI-adjacent companies to have unfettered access to content would be nothing short of a disaster. It seems to me that this push from OpenAI and Google is out of a desire to justify the deep expense of their product, in spite of its increasingly diminishing returns. Please do not fall for this.
