General Comment

It is unlawful to use, in whole or in part, the artwork or intellectual property of another with out seeking permission or offering compensation for said use in almost any other context in our society. It should therefore be unlawful to use the works of human creators in the training of Artificial Intelligence (A.I.) models without permission or compensation.

This should especially be the case as many A.I. models and their creators specifically wish to use said A.I. to replace or render redundant the very creators of who's works are being sampled to train the A.I. in the first place.

What's more, the tactics used by these companies to obtain training data from content creators, such as using works submitted to social media platforms, with NO OPTION to opt out of such use, and past submissions being taken as consensually submitted even though they PRE-DATE the programs sampling them, are unethical use of another's works or intellectual property.

I do not approve of or condone the U.S. Government's sanctioning of such unethical and unlawful corporate behavior and I urge lawmakers to reject any notion of legalizing it in future.
