General Comment

AI models should not be developed on copyrighted material. It's theft. It's not "learning" like a human learns from practicing painting, drawing, composing music, writing. AI is programmed from stolen work, trained to recognize patterns based on an impossibly huge collection of existing, copyrighted material. The advances in generative AI are already taking away jobs that used to exist for people who paid tens of thousands of dollars to specialize in creative fields. It is cruel and anti-human. It's against our very lives. If we had universal basic income for everyone, this aspect of machine learning would not sting as much. But it is stealing our work and literally taking our jobs. Is this the future we want?
