General Comment

It is, to put it mildly, chilling to think that best work of human minds could be devalued into an undifferentiated mass of content for no reason other than to allow energy-gulping megacomputers to average it, plagiarize it, present the "content" as their own, and (here's the point, of course) monetize it.

Beyond all the distractions about the AI race writ large and AI's possible applications in other, unrelated fields-- when it comes to art (that is, when it comes to question of "copyright"), the issue we're faced with is a simple one: it's a matter of whether you value the work of the human mind as something singular and sacred or whether you assign it value only by its mass, "books by the foot"-style, considering it mere grist to a feed to an indifferent mill that will spit it out like so much chum.

I am proud member of Team Human and am passionately against anything that allows AI to consume the work of human artists without their explicit consent. I suspect hundreds of millions of other people would be against it too, if they knew it about it-- and will be, when they do.
