General Comment

What makes a technology company an exception to copyright laws? The answer is: nothing. If you answer any other answer, then you must be in their pocket. We cannot allow AI companies to skirt copyright laws that everyone else is beholden to just because they say they cannot make their product without it. Well boo hoo, then they can't make their product. Especially when that product's sole purpose is to put the very people (artists, writers, coders, etc) they are stealing/copying from out of work. AI is theft, pure and simple, and if you allow any AI company to be an exception to established law, then you will see a few already-rich tech companies stealing all the hard-earned wealth from countless creatives and others. That's all they really want. Please do not allow it.
