General Comment

The fact that a legal entity is excused from violating regulations that were put in place to protect one of the main reasons why the United States of America is the wealthiest, and most prosperous country in the history of the world (the Copyright Act of 1976) is extremely counter-intuitive and is fundamentally anti-American.

One of the biggest reasons art and the ability to profit off creative work is thanks to this act and protection. Now, this thing that we're talking about here will, as previously mentioned will effectively pardon the violation of every writer, every Hollywood film animator, journalist, author, and digital artist's rights.

If you really wanted to, you could rip copyrighted work from the hands of artists alike- all through these AI tools- effectively filtering out legal various consequences.

There are other more beneficial ways to have information to feed an AI model, too. Ladies and gentlemen, it's called asking for permission. If permission is granted, and both parties agree, then the people licensing work is supported, and both parties have a wonderful day.

This is not fair use. This is a direct attack on the livelihoods of all artists alike.
