General Comment

Hello,

My name is Sam, I like I imagine many others am here to advise against the use of training AI on copyrighted work. The place for artificial intelligence is not in the realm of media or literature or art. Creativity has been a staple of humans since our conception from cave paintings, to early texts, the great works of the renaissance and literature like Shakespeare, fantastic music by great minds, Beethoven, Mozart, Bach. Art from Da vinci, to Van Gogh, to Picasso, to movies and shows that have been able to reach across the globe. Creativity has been something that has been cherished and used throughout human history to expand our horizon, technology.

But if we allow AI to train on stolen works and pump out material that is only slightly better than what it is capable of humanity will take a step back and surrender our creativity. AI has no emotion, no soul, no want for what it is making, its just trying to fulfill a prompt, and using existing work in a poor way to try to achieve it. It may follow a protocol to achieve an idea or image, but it isnt creative. It's lazy, it unimaginative. If we lean into using AI we will be sacrificing creativity in so many fields of work, and destroying the entire history of our species and centuries of growth, we will introducing something that is robing creativity from so many and people would use to discredit the work of so many, to cut corners, to try and take the easy route. But people have never taken the easy route, it has always been about hard work and creativity. Don't Destroy the foundation of our entire history and species

Thank you for your consideration

Sam Haines
