General Comment

As an American who writes professionally for a career and as my creative vocation, the use of LLMs and other supposedly "generative" AI is a threat to my livelihood and that of countless others who work as writers, photographers, illustrators, and other artists. I urge you to consider in making this plan:

- 1) I strongly oppose the training of AI by using creative work from writers and artists without our permission. This is ongoing theft on a widespread scale and it's a direct attack on intellectual property rights.
- 2) What's more, the supposed "art" created by generative AI programs looks terrible, the writing they produce is worthless, and the supposed answers provided by AI search and chatbots are often inaccurate or even hazardous. Google's AI Overview has encouraged users to eat rocks and to eat glue, for example. The Gemini AI chatbot encouraged at least one user to kill themselves. AI programs have propagated lies such as the claim that former President Obama is a Muslim, as well as using racist slurs. Generative AI has also invented fake academic research studies that never existed, leading to real confusion for students and reporters trying to cite real studies.
- 3) Meanwhile, these programs waste large amounts of water and electricity.
- 4) Generative AI has been overhyped by unethical companies to fleece the American public.
- 3) Generative AI has no place in the future of our country's technological development.
