General Comment

Artificial intelligence company heads have said repeatedly that their business cannot function if they're not allowed free and unrestricted use of copyrighted and otherwise protected works.

To that I say: if they can't function without stealing other peoples' work, then they don't deserve to function at all.

Copyright protections are vital and cannot be discarded just because an AI company's CEO says "but we need it." They need to work within the law to license works properly or create their own if they want to use it for training, and cannot be given an exception that allows them free access to works that they have no right to. That's simply un-American.

And as these CEOs continue to demand free access to copyrighted works, their AI continues to remain unreliable and inconsistent. Generative AI is still prone to major errors and hallucinations, as it merely repeats what it imagines the next word in a sentence is, without any fact checking or verification. Artificial intelligence is far from intelligent, and giving AI companies free reign to steal works from other people isn't going to make them any more accurate.

Any business that relies on theft to succeed has no right to success.
