General Comment

I oppose letting AI companies have free access to copyrighted works, and then plagiarize the contents of those works for generative output that they sell.

I do not believe generative AI has the potential to create value for business in general, but it does have the potential to harm authors and other creators, who do genuinely add value to our society.

I believe that generative AI is a money sink that is currently overvalued, and that any regulations that cost the private sector money or protect human creators will be deemed "unnecessarily burdensome" by AI companies. All effective regulations that prevent bad actions, including theft or fraud, are "unnecessarily burdensome" to those seeking illicit profit.
