Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-8243

Comment on FR Doc # 2025-02305

Submitter Information

Name: Christina Tsui

General Comment

Hi there!

We desperately need legislation that will start limiting what AI companies have access to and what they can generate and give to the public.

I don't believe that companies will consider the ethical ramifications of pushing AI onto the public. It's a technology built on copyright infringement--on the backs of centuries of actual, unwilling human creators with life experience and a vision. And for what? So someone can rapidly generate more soulless slop? It benefits no one but the companies spearheading this technology, desperate to make another soulless buck.

We've also seen with social media companies that they will not take responsibility for what users post on their platforms. We've seen the rise of cyberstalking, revenge porn, alt-right thinking, conspiracy theories, and general misinformation. What do you think will happen when people have free rein to generate and deepfake whatever they want? The onus cannot be on the individual to sift through the thousands of images and videos they look at every day. It just isn't realistic. AI will continue to improve and it will be increasingly difficult to tell what's real and what's fake.

I believe we desperately need guardrails limiting this technology and we need it NOW.
