General Comment

AI must be highly regulated as the use and development of these tools has vast impact across society. Citizens deserve to have transparency in AI tools. It is essential to protect the creative intellectual property of citizens and AI is not exempt from those protections. AI should be clearly identified and transparent in how models are developed. This is important to the creation of useful and prosperous American products that do or do not use AI. Such protections make America a great nation and a prosperous future is ahead. AI regulations will bring stability and prosperity that is sustainable.
