As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-2erh-g7hs
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-8250

Comment on FR Doc # 2025-02305

Submitter Information

Name: Sean Goebel

General Comment

Majority, if not all, nations have laws in place against theft. Typically these laws punish those who would steal, whether the theft be in the form of material objects, data, or intellectual property. Generative AI requires theft of works created by others, both individuals and collectives, in order to function. Unless the company can gain permission for use or rightfully compensate the individuals behind the material intended for training, that is theft, plain and simple. And why limit the theft to works created by the public? If Generative AI uses intellectual properties belonging to major companies is that also ok? Is a company using Generative AI “trains” their model on patented information, should that not open the company up to lawsuits for theft of intellectual property? Or does the definition change because it targets the property of a larger organization which most likely uses that property to make money. In short, if Generative AI can be used to steal property from the people than it must also be able to steal property from corporations and use that data as it so pleases, even if it may decrease profits for said corporation and take business from it. Each individual must have ownership of that which they create.
