## General Comment

The AI bubble is going to burst soon, and I don't see how generative AI meaningfully improves lives. My experience with AI at my work in academic publishing is as a disinformation machine that clogs up the works and makes things harder for publishers and authors. It is a predictive remixer and will never be able to differentiate between truth and untruth. I have yet to see proof that it improves language or images. I have yet to see proof that it can make things more equitable for people. It is an entertaining parlor trick, but I am unimpressed with all the outputs I've encountered. People talk about it like it will save lives (and flying cars are 5 years away), but it can't even save time. It has already wasted tens of hours of my time, which is essentially lost money for my employer. Do not give away the rights of people who actually create to enrich those at the top of a Ponzi scheme. There's plenty of slop on the internet; we need to support real creators, not the AI money pit.
