## General Comment

Hello. For the fastest possible context: I am a former software developer and QA tester now working primarily as an actor (videogames and animation focus) and audio engineer (audiobook focus). I have a degree in both Theatre and Computer Science. My background and current status as an interdisciplinary professional make me intimately familiar with both technology and the arts. My pursuit of varied disciplines has never felt incongruous to me; conversely, I strongly believe that "traditional" art and technology are inherently symbiotic as a means through which humanity expresses our thoughts, emotions, and agency.

Art is a means through which we retain the ability to connect with our forebears; it destroys the barriers of time and allows us to convey messages to those who will come hundreds or thousands of years after our death.

The current wave of "generative" AI technology does not, has never, and (insofar as I am concerned) will never possess a meaningful capacity to create original works or be used as a meaningful measure through which humans can articulate our experiences. It is nothing more than a means of soulless plagiarism, scraping and regurgitating the contributions of human beings who expended such tremendous efforts to express the joy of creation. I do not wish to live in a world that has automated away all joy of creation.

Another valuable detail: I am physically disabled. My disability has rendered me unable to perform what was once an integral part of my identity as an artist and human being. I grew up as a pianist rather than an actor; the progressive loss of joint function in my hands has left me without the ability to partake in playing my instrument at even 10% my prior capacity.

I would rather render my hands entirely bereft of all function before allowing robots to scrape what compositional contributions I have made with absolutely zero means of recourse. The idea of them reanimating my contributions to music without any measure of prevention, consent, or stoppage is viscerally repugnant to my sense of humanity and overall morality as a human being.

Additionally, I implore you, on behalf of the >160,000 creatives currently striking with SAG-AFTRA in a financially brutal strike that is \*existentially\* important in preventing the decimation of our industry and artistry by unregulated AI, to not give OpenAI and all its "kin" (i.e. other "generative" AI companies) any ground in violating creatives' rights to our own work and contribution to the grand tapestry of human experience.

Please extend even a modicum of respect for the contributions of all human beings to the arts; we are fundamentally social animals. Some of our earliest artifacts from homo sapiens are instruments. Even if creative professionals mean nothing to you: every drawing produced by a child, or illustration done absent-mindedly on a lunch break, or tune hummed from seemingly nowhere whilst buying groceries, should not be fodder for algorithmic regurgitation. Protecting the arts is protecting the value of humanity, both in concept and in practice. Thank you for your time.
