General Comment

I think the obvious solution to the problem of training AI on large data sets, data sets which include copyrighted works, is to abolish copyright. I think the easiest and most elegant solution is to abolish copyright. And lastly and most importantly, I think the fairest way to enable AI research is to abolish copyright. OpenAI claims quite desperately that copyright law is an impediment to AI research, and if they need an exemption from copyright law, I certainly see no reason why an exemption should apply to them alone. Donald Trump and Elon Musk have preached cutting government red tape and supercharging the economy, and I can think of no better way to practice what they preach. Help America. Free America from the tyranny of century-long copyrights.
