General Comment

This document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be reused by the government in developing the AI Action Plan and associated documents without attribution.

AI is a remarkably nebulous term still. As such, it is difficult to call superiority, or even really cite truly ethical use, of AI as a whole. What we do know of AI currently is that it swept the internet, taking in copyrighted data and built itself up illegally using that information for profit. As such, until such a time that all AI is put through rigorous examination to remove all of the data that isn't used with permission, this executive order is pushing technically illegal activity.

In order to push this part through, AI has to be defined better, and refined to be fully legal and ethical.
