

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-2fik-q780
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-8275

Comment on FR Doc # 2025-02305

Submitter Information

Name: Thomas Smolenski

[REDACTED]

General Comment

It is imperative that this technology not have free access to copyrighted material or intellectual property.

I am writing as a business owner, educator, and a creative director in the entertainment industry with knowledge of trademark and copyright, as well as complex technologies.

Allowing AI access to copyrighted works weakens the United States' position to protect it's intellectual property and unique cultural contributions (ie the entertainment industry as a whole which generates billions in revenue due to it's capability to control ownership of intellectual property. This includes the sale and securitization thereof.

If Artificial Intelligence models are allowed to use copyrighted works for commercial machine learning purposes they would do massive damage to the United States economically and as a leader worldwide. It would also give massive advantage to our international competitors who would be able to argue for their own use of US copyrighted materials for their own machine learning, or at the very least use the same technology.

The technology itself must not be permitted to utilize copyrighted works in it's machine learning without a system for licensing and compensation to owners of intellectual property.

If the technology is unable to implement such safeguards, or possible to be controlled, then it is too early in it's development and not fit for use.

Especially not where any manner of sensitive data or copyrighted material is concerned.
