General Comment

To allow Generative Artificial Intelligence to bypass copyright laws would be catastrophic to the livelihoods of various artists, both on a business and independent level. If A.I. is able to just take anything to learn from, many pieces of art and media can be taken without a care, being basically stolen from without someone's means to protect their work. This includes various businesses trying to protect an intellectual property that gets constantly used to generate something from Gen AI without permission. Allowing this to be done without any repercussions from any sort of copyright law is an absolute danger to the creative fields many rely on and should not be allowed.
