## General Comment

Ai generated media should be held to more scrutiny when it comes to copyright. It has become so easy for these models to scrape the web for thousands of articles/images/videos/audio files that they are taking from hundreds of creators at a time. Some people liken generative ai to creators being inspired by other works, then using that inspiration to help them create. However, inspiration is a uniquely human process where the creator adds something unique to them. If they aren't being transformative and they just take, that can be titled plagiarism or copyright infringement. Generative ai takes, it is incapable of adding anything original. If it can find hundreds of sources to pull from to generate media, it also needs to be held accountable for accurately and explicitly crediting those sources.
