General Comment

Do not allow AI companies to train on data that they do not access ethically. AI development companies stand on the precipice of a significant overreach of privacy and personal property. They endeavor to take the wealth of human-made knowledge and produce derivative technology for personal profit. There's no promise of the actual efficacy or benefit to mankind from the production of this technology, only a promise that they can continue to maintain some relevance in the market for their shareholders.

OpenAI and other AI research companies that want access to more data are promising to turn our art, our science, our medical records, our private information into fuel for their bottom line. It's not just theft, its greedy information laundering, no other industry is allowed so much lenience with intellectual property. The sparse potential benefits don't outweigh the privacy concerns from corporate entities already which have a history of wanton breaking things then asking forgiveness. Put a stop to their abuse.
