General Comment

The development of AI should be done ethically and this plan does not ensure that. The myriad problems of AI are well-evidenced in scientific research. AI replicates and amplifies biases. LLMs and GPTs in particular are inaccurate and unlikely to admit when they cannot find and answer. AI should not be trained on copyrighted or other protected materials (that's theft). AI consumes massive amounts of energy and thus, its use should be balanced against its social and environmental harm. This comment is a plea to exercise restraint and to conduct a thorough ethical analysis of any AI research, product, and application. In other words, it is a plea to carefully regulate and mitigate harm.
