General Comment

I am an individual American citizen. I haven't done much in my life or necessarily pushed myself down a career path. The overwhelming prevalence and push of AIs in current times fills not only myself, but many friends to dread of their futures. Any action allowing AIs to be trained unfettered on every kind of data, will create a space where large corporations able to pay for services or host AI services will first train from and then supplant real humans in many, many field simply by offering the services for cheaper than what humans are able to.

This will cause many, many jobs to be lost and likely never to be gained again should these current fetters be stripped. Many, many artists of all kinds will lose jobs. Writers, be they creative or technical. Beginner programmers will be deemed unnecessary because AI learning models will make current professionals more efficient. All so those that own the AIs and its services can make more money by hiring less.

Seeing a future where AIs are free to train on whatever they want is one filled with dread, where any field I could want to try and move my life and interests towards, is shut down because beginner or apprentice workers become obsolete because it's just cheaper to use an LLM.

AI can be and already is a very useful tool, note, TOOL. Frame interpolation saves 3D artists from rendering about half their frames. It can similarly be used in 2D animation to interpolate in between frames, while the skilled artists create the key frames that define the movement. Spell checker tools have been commonplace for a while and have improved as time goes on. Neural Networks make reviewing vast amounts of research papers take much less time and allow scientists to do science more instead of reviewing for hours.

There is so, so much that AI/Neural Networks are capable of that focus on benefiting people in many, many practices. Allowing them to learn unfettered on copyrighted materials does not focus on benefiting people, it focuses on the owners of the AI and those large corporations that employ their services, and little else.
