As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-2jppj-tk88
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-8370

Comment on FR Doc # 2025-02305

Submitter Information

Name: Declan Galleher

Address: United States,

Email: [REDACTED]

General Comment

AI in its current iteration of LLMs and image generators are, for the most part, a solution looking for a problem. The primary use cases have been students cheating on assignments and grifters being able to pump out scams more easily. OpenAI has lost billions of dollars of VC funding and have admitted that their main plan for becoming profitable is to create a hypothetical artificial general intelligence that will tell them how to become profitable. This fantasy is based on absolutely no evidence that something like what they imagine is even possible. OpenAI built this plagiarism machine on the intellectual property of the countless authors and artist who gave no consent for this to happen and given no warning that it would. This abuse of intellectual property has coincided with the waste of huge amounts of fuel and electricity to keep the servers afloat all while doing nothing more interesting than summarizing a few emails. None of this deserves any reward by the US government. AI is not the future, and not a reason to make it easier to use others intellectual property without permission to fund business interests. Big tech has not given the general population a significant advancement in the years since the smartphone hit the scene, and their desire for infinite growth has finally leveled out. No matter how badly they want these AIs to be that next big thing that will sent their stock prices back into the stratosphere, it won't work. If AI was truly the next big thing, they would have to spend so much time and money trying to convince the average person it's something they need. And just because they're spending a lot of money now doesn't mean that will turn into profits in the future. Amazon and Uber lost money for years creating themselves monopolies in already existing markets and then jacking their prices once that process was complete to then become profitable. OpenAI doesn't function like that. They're not disrupting existing markets, they're only pushing to have their tech to be stapled on as a feature to other existing technologies. That's not a product that people feel like they can't live without. This is all a confidence game based on dreams of science fiction becoming a reality. Do not reward this behavior. Nothing will come of this but resources wasted and artists hard work abused.
