General Comment

Generative AI is theft, stealing from human creators, most often without their consent. Most accurately, it is a scam trying to pass as human work when it can never be. It often creates more work for humans with the fallibility of its creations and requires diligence to ensure accuracy. AI cannot be trusted as it lacks a human's discretion and ability to say "I don't know the answer to that." With all that being said, generative AI does not deserve special exemptions from the law and should be heavily monitored and never given free rein of data.
