General Comment

The removal of guardrails for the development and usage of AI opens us up to many risks, but two in particular are concerning to me. First, an over reliance on AI can stifle human ingenuity and make us less competitive. Studies have already shown a decline in cognition caused by a reliance on these tools. Second, while there are effective use cases for AI (parsing large datasets, scanning x-rays for tumors), embracing all forms of AI and simply allowing these companies to scrape any data they want and generate any content they want will effectively poison the well of human knowledge. In short, AI poses a threat to baseline human intelligence as well as our current store of knowledge and information.
