General Comment

The way machine learning is being used by corporations right now is reprehensible. Stealing content from the entire internet, feeding it into a machine so it will vomit something back up which they hope to sell. These data sets are using STOLEN DATA and this is NOT fair use. It's corporations trying to bend the rules so they can make money without paying for human labor. And they are not even making a profit from AI. It will never be profitable because the end results are trash. Companies like Google are implementing AI in their products and make it impossible to turn them off, which of course gives a false impression of AI's desirability and success. Some AI server farms make more money getting paid by local governments to shut down and stop using so much power than they do from the AI services the server farm is for. This is out of control. AI/machine learning does not need to be outright banned but there need to be very strict laws to control its use. Research and non-profit only. All data sets must be obtained with permission from copyright holders. No public tools for regular citizens to use for fun or for evil. AI can be used for good, but it is TOO EASY to use it dangerously. Make it harder to access. Nobody gives a damn about the USA being the leader in AI technology except CEOs. Don't encourage them. Make them STOP.
