General Comment

Any AI Action Plan must respect the rights of copyright holders, and allow them to determine if and when their works can be used to train AI, including what compensation they will accept in return for granting those rights. Any approach that does not include that protection is a taking of private property without due process.

Furthermore, environmental standards regarding use of power and water must be set, to ensure that AI data centers do not reduce power or water available to meet needs for the general population or existing businesses.
