

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-2mur-a9l9
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-8441

Comment on FR Doc # 2025-02305

Submitter Information

Name: S. B.

Address: United States,

Email: [REDACTED]

General Comment

Allowing tech companies to declare unfettered use of all American copyrighted material will do permanent damage to our country. American creative work will be stolen and repurposed by companies who seek only to enrich themselves at the cost of all people. Even with billions of dollar invested, both private and public, they barley meet their own gentle benchmarks. OpenAI sobs that they will lose to China if they are not granted our countries trove of creative work. Yet even by their own standards, their mumbling, stumbling, mindless language model is somehow dumber, more expensive, then the Deep Seek model Chinese programmers released for free. A model whose creators say is only a novelty, and will not be the focus of future tech advances. Open Ai declaring they need more money and data is absurd when you consider OpenAi says Deep Seek "stole" their code, yet they wish to plunder all American copyrighted material. They scream fraud as they try to rip off the locks protecting our culture.

Furthermore, OpenAI's output is gargage, and no raiding of copywrite works will change that. Don't believe me? Look at the brain dead, drooling, mouth breathing, knuckle dragging, AI generated dross of Buzzfeed, any content farm, and just about every Op Ed writer. This the future they want! It's garbage! It's filth! It's empty, pointless, Sam Altman looks like he knowingly ate his twin in the womb, erodes our critical thinking, is a tool for scams, like, Altman looks like he made a conscious choice to eat his embryonic twin, pollutes our society, and is ultimately a technological dead end.
